Automated Wire Free Blinds  
Honeycomb

# The NEW solution to automation in window treatments

QMotion UK Advanced Shading Systems specialise in providing wire free window covering solutions for the home, office, healthcare and hospitality sectors. Unlike traditional motorised window coverings, QMotion UK window coverings are wire free so there is no need for a qualified electrician to install power wiring.

Now for the first time the user has the ability to install a fully functional quiet motorised Honeycomb system. QMotion UK provides a wire free Honeycomb blind which can be operated by remote control, or by smart phone and tablets using the QMotion app. The user can remotely operate their blinds individually, by room, by elevation, by floor and all at the same time.

Other operating controls available are a timer remote that allows the user to program the blinds to move up to six events per day. The user therefore has no need to worry that whilst they are either out or away from their home the blinds will continue to operate providing glare and heat gain control whilst at the same time offer a level of privacy and security. With unique inbuilt technology, the QMotion UK Honeycomb blind also provides a dual control feature that allows the user to operate the blind manually for raising and lowering the blind without the need for a remote control. Simply tugging the bottom bar you can lower the blind or send the blind back up to either its last preset position or to a fully raised position, bringing a new level of convenience to blind controls.

## Easy Battery Replacement

By just removing the decorative clip on fascia you are able to access the readily available alkaline D cell batteries in the blind headrail, you can now change the batteries without having to remove the blind from the brackets.

## Upgradeable

QMotion UK Honeycomb blinds are available as a fully cordless manual blind, with all the aesthetic and child safety benefits as the motorised version. Even after the manual blind has been made and installed your QMotion UK dealer can return and insert the motor battery pack in the headrail to enable the blind to become motorised, without taking the blind away from your home. Yet again QMotion UK bring innovative technology to manual window treatments whereupon the user can benefit from a upgrade manual to motorised blind without having to order a complete new blind.

- Completely wire free motorisation - no exposed wires or RF antennas
- Manual override (blind can be moved by hand without the need for a transmitter)
- Easy three minute set up after installation to provide upper and lower stop positions as well as automatically including three intermediate equal and aligned stop positions
- Powered by standard readily available D cell type batteries giving 2-5 years operation based on 2 cycles per day normal usage
- Batteries can be changed over easily by anyone as they are contained within the blind hardware itself
- QMotion UK blinds come complete with a five year warranty

## QMotion UK Control Options

Along with the newest and most innovative control technology QMotion UK blinds can interface with nearly all home automation systems either new or existing within your home. QMotion UK has developed the following accessories to make interfacing as easy as possible.

### Qconnect

Interface communication device to support integration with most home control systems.

- RS-232 / RS-485
- Dry contact interface
- 15 channel
- 9V DC or power over CAT 5
- 15 metre range of signal - further Qconnect's can be added to increase range

### Programmable Timer Remote

Works the same as a single channel 5 button remote plus programmed automated settings.

- Supports 6 events
- Windows PC programmable
- Time of day, days of week

### Multi-Channel Remote

Up to 6 individual or group settings plus an "ALL" setting.

- Up to 3 custom presets
- LED feedback
- Motion activated channel indicator

### Qrelay

Improves signal reception where factors effect remote transmission.

- Extends range of all QMotion UK remotes
- Powered from a wall outlet or from a powered USB port
- Two modes of operation

### Qsync

QMotion UK Smartphone Application "App" Features:

- Control QMotion UK blinds with iOS devices - Android devices coming soon
- Virtual Blind: Drag your finger to place the shade to the desired positions
- Connects automatically to Wifi\* and Bridge. "Plug and Play"
- Channel System to name, take and set reference photo to group shades
- Step by Step setup for learning, setting lower limit, and deleting blinds
- Control nearly 500 blinds or groups from each Qsync TCP/IP to 433Mhz bridge\* (Automatic Wifi Connection not available on iOS)

### Remote Wall Station

For the convenience of the user, consider a Wall Docking Station.

Available in single, double or triple gang versions, these wall plates are built to install on a wall as a place to retain the transmitters used in a project. Remote controls hold in place on the docking station via a strong magnet. Wall plates are flush mounted and do not require routing a hole in drywall or other mounting wall finishes. For places where a remote should be "permanently" attached to a wall, our wall plate keepsers mount around the remotes, making them virtually impossible to remove without a screwdriver.

# Fabric Choices

## QMotion UK Honeycomb blinds give you the flexibility you desire

The honeycomb collection features beautiful, high-quality fabrics that add warmth and a designer style to your home's décor. Honeycomb blinds are available in 4 fabric types: sheer, semi-sheer, semi-transparent, and blackout. Each offers a different degree of privacy and light control and depending on the type of fabric, are available in 3/4" single cell or double cell.

### Fabric Cell Sizes

- 3/4" single cell or 1/2" double cell

### Sheer and Semi-Sheer Fabrics

- Transmit light with view through the blind
- Do not provide privacy
- Available in 3/4" single cell fabrics

### Semi-Transparent Fabrics

- Transmit filtered light with no view through the blind
- Provide moderate privacy
- Available in 3/4" single cell and 1/2" double cell fabrics
- Semi-translucent has woven or printed fabrics available
- Double cell texture and classic colours are available.

### Sheer and Semi-Sheer Fabrics

- Transmit light with view through the blind
- Do not provide privacy
- Available in 3/4" single cell fabrics

### Room Darkening - Blackout Fabrics

- Blocks 99% of outside light
- Provides complete privacy and light control
- Available in 3/4" single cell and 1/2" double cell fabrics

### Energy Efficiency

Honeycomb blinds are among the most energy-efficient window coverings available. The insular property of honeycomb fabric is attributed to its unique cellular construction creating a barrier of chambers designed to reduce heat and the damaging effects of UV light.

### Customisation that's right for you

- Choose from our assortment of remote controls. Among the choices is our programmable timer control which allows for setting of times for unattended blind movement or our multichannel remote to control various blind groups from a single hand held remote. All remotes fit on our magnetic wall docking stations, and may be secured in place using our wall station adapter.
- As our programming is simple, all blinds arrive ready to "learn" to your remotes. A blind may be controlled by as many as 12 different transmitters.
- QMotion UK Honeycomb Blinds can use the same remotes as QMotion UK Roller shades, providing unique control options.
- Combine groups and remotes for your convenience. A channel can be for a single blind or a group of blinds, and various groups can be programmed to suit the space.

# Accent Colours

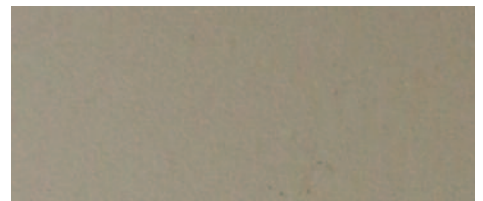

QMotion UK helps you bring out the beauty of your fabric by offering you these luxurious headrail and bottom rail colours that accentuate the look of your blinds.

Terracotta

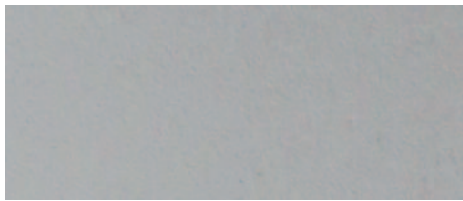

Ash Gray
