Automated Wire Free Blinds
Transition[™]

The NEW solution to automation in window treatments

QMotion UK Advanced Shading Systems specialise in providing wire free window covering solutions for the home. Whereas traditional motorised window coverings require a qualified electrician to install 240v power wiring for the blind motor, the QMotion UK solution requires no wiring at all.

Now for the first time the user has the ability to install a fully functional quiet motorised blind system that provides a wire free system operated via remote control or by their smart phone or tablet using the QMotion app. The user can remotely operate their blinds individually, by room, by elevation, by floor and all at the same time.

Other operating controls available are a timer remote that allows the user to program the blinds to move up to six events per day. The user therefore has no need to worry that whilst they are either out or away from their home the blinds will continue to operate providing glare and heat gain control whilst at the same time offer a level of privacy and security.

With unique inbuilt technology, the QMotion UK blind also provides a dual control feature that allows the user to operate the blind manually raising and lowering the blind without the need for a remote control. By simply tugging the bottom bar you can lower the blind or send the blind back up to either its last pre-set position or indeed to a fully raised position, bringing a new level of convenience to blind controls.

Power for the blind is provided by standard readily available alkaline D cell batteries. Due to the special counter balancing springs installed within the tube itself, the batteries provide 2-5 years operation based on 2 fully raise/lower operations per day.

Easy Battery Replacement

By placing the access port for the readily available alkaline D cell batteries in the blind tube wall, you can now change the batteries without having to remove the blind from the brackets.

Please ask your QMotion UK Authorised Distributor to show you our full range of fabrics that are available for use with the system.

- Completely wire free motorisation - no exposed wires or RF antennas
- Manual override (blind can be moved by hand without the need for a transmitter)
- Easy three minute set up after installation to provide upper and lower stop positions
- Powered by standard readily available D cell type batteries giving 2-5 years operation based on 2 cycles per day normal usage
- Batteries can be changed over easily by anyone as they are contained within the blind hardware itself
- QMotion UK blinds come complete with a five year warranty

QMotion UK Control Options

Along with the newest and most innovative control technology QMotion UK blinds can interface with nearly all Home Automation systems either new or existing within your home. QMotion UK has developed the following accessories to make interfacing as easy as possible.

Qconnect

Interface communication device to support integration with most home control systems.

- RS-232 / RS-485
- Dry contact interface
- 15 channel
- 9V DC or power over CAT 5
- 15 metre range of signal - further Qconnects can be added to increase range

Programmable Timer Remote

Works the same as a single channel remote plus programmed automated settings.

- Supports 6 events
- Windows PC programmable
- Time of day, days of week

Multi-Channel Remote

Up to 6 individual or group settings plus an "ALL" setting.

- Up to 3 custom presets
- LED feedback
- Motion activated channel indicator

Qrelay

Improves signal reception where factors effect remote trasmission.

- Extends range of all QMotion UK remotes
- Powered from a wall outlet or from a powered USB port
- Two modes of operation

Qsync

QMotion UK Smartphone Application "App" Features:

- Control QMotion UK blinds with iOS and Android
- Virtual Blind: Drag your finger to place the shade to the desired positions
- Connects automatically to Wifi* and Bridge. "Plug and Play"
- Channel System to name, take and set reference photo to group shades
- Step by Step setup for learning, setting lower limit, and deleting blinds
- Control nearly 500 blinds or groups from each Qsync TCP/IP to 433Mhz bridge* (Automatic Wifi Connection not available on iOS)

Remote Wall Station

For the convenience of the user, consider a Wall Docking Station.

Available in single, double and triple gang versions, these wall plates are built to install on a wall as a place to retain the transmitters used in a project. Remote controls hold in place on the docking station via a strong magnet. Wall plates are flush mounted and do not require routing a hole in drywall or other mounting wall finishes. For places where a remote should be "permanently" attached to a wall, our wall plate keeps mount around the remotes, making them virtually impossible to remove without a screwdriver.

Qmotion®uk

advanced shading systems

QMotion Transition blinds offer the elegance of a sheer with the added benefit of light filtering fabric. Imagine combining the fine-tunable opacity of a slatted blind with the elegant translucency of a light-filtering roller shade fabric and being able to transition between the two. Our specially designed roller fabrics feature alternating stripes which are controlled by QMotion's ultra quiet, battery operated motors. QMotion's wire free remotes give you full control to seamlessly shift the strip pattern from fully "open" to fully "closed" – or anywhere in between. It's a completely unique offering for light and visibility management. QMotion's Transitions Blinds are operated via remote control, smart phone or tablet and can be integrated with leading home automation systems.

QMotion Transitions come complete with an attractive cassette cover which is available in the following standard colours Grey, White, Sand, Black or Bronze

Maximum width: 2450mm
Maximum Drop: 2750mm
