HDM-JRPLUS

Created to fulfill the unique needs of the Custom Integrator, Metra Home Theater Group's HDM-JRPLUS is the Custom Integrators "Go to" EDID problem solver.

While fully backwards compatible the HDM-JRPLUS was designed for the most modern components providing 18Gbps throughout and covering all 4K /HDR Rev2.0 features to ensure years of reliable HDMI® service.

PRODUCT OVERVIEW

Following in the footsteps of our original HDM-DAD and the HDM-JR, the HDM-JRPLUS was created to reduce the effective capacitive loading "Rise Time" issues commonly found on the DDC channel (EDID) of the HDMI® interface.

This can be caused by cables, printed circuit boards, and environmental conditions. The HDM-JRPLUS reduces the cables capacitive issues loading by 50%. The "PLUS" part is a recent development that was designed to deal with Voltage and Current equipment incompatibilities within the new EDID substructure.

FEATURES

- True 24Gbps (4X6Gbps) Pass-Through
- HDCP 2.2 Support
- HDR Support
- BT 2020 Support
- Deep Color Support
- RF Shielded Metal Case
- Self Powered
- 50% Typical Reduction In Data Rise Times
- Small Size
- Male/Female Form Factor

SOLVES MANY COMMON ISSUES SUCH AS:

- Audio Dropouts
- HDCP Not Supported
- Mode Not Supported
- Mode Out Of Range
- Long Sync Times
- And the ever popular Black Screen
