

## DEALER SPOTLIGHT: LEWIS LIGHT & SOUND

23-JAN-19

Case Study | Dealer Spotlight

**LEWIS Light & Sound LTD, founded in 2015 by avid music and technology lover; Alex Lewis, provide easy to use solutions in the AV, light, and home automation sectors. Future Automation has worked with LEWIS Light & Sound on various projects and has provided their customer base with automated solutions in both the residential and commercial sector. They have over 13 years' experience in the AV, lighting and home automation industry.**

Alex Lewis, the founder of the company, said he knew "**Future Automation** would be able to deliver whatever was required" when consulting with customers about future projects. One particular brief was a requirement for a large screen and cinema experience that would not take over the room and be overpowering. A drop-down TV was deemed the right solution. The customer didn't want to obscure the large floor to ceiling windows and mask the daylight that comes through them; therefore, **Future Automation's Motorised Ceiling Hinge** was the perfect accessory. The product allowed the TV to be lowered to the right viewing height and was integrated easily into the Control4 System, the control system used throughout

the home, making the lift controllable via various methods.

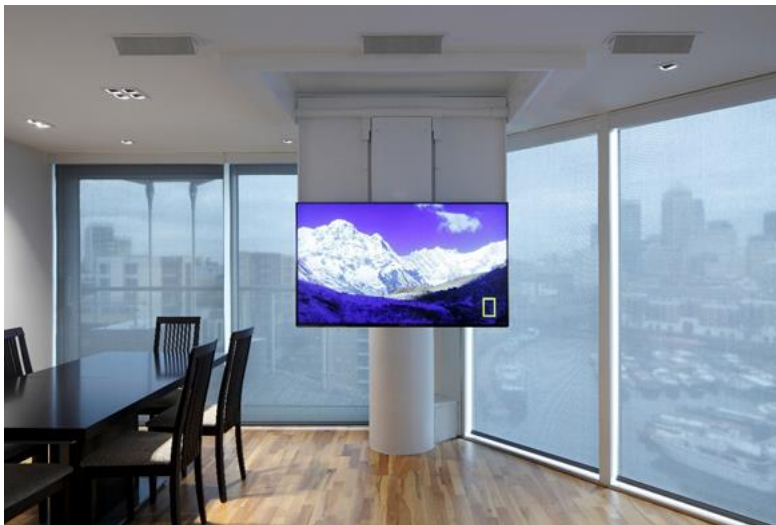

**LEWIS Light & Sound** have previously used other **Future Automation** motorised lifts, so they knew what to expect in terms of high quality and durability. **LEWIS Light & Sound** were pleased that the lift arrived prior to its delivery date and the installation ran smoothly due to the clear instructions that are already available online.

Both **LEWIS Light & Sound** and the client were extremely pleased with the results and the client uses the mechanism every day. Alex Lewis said, *"we had no doubts, as we are confident that Future Automation products are well designed and built, giving us the confidence to install them in our client's homes with the knowledge they will perform well and reliably for years to come."*

The client, also very happy with the way **Future Automation's** mechanism seamlessly integrated into their home, said "*We are delighted with the home automation system that Alex created for us. He produced exactly what we were looking for when we first envisaged the project.*" **Future Automation** is pleased that **LEWIS Light & Sound** chose our **Motorised Ceiling Hinge** to perfectly meet the client's brief and that they were so happy with the end result.

We have previously worked with **LEWIS Light & Sound** on another project. This time the brief was to find a solution to allow the client to watch TV from four areas of their open plan home. It was decided that **Future Automation's TV Lift Swivel** would be the ideal solution. The mechanism allowed the client to watch TV from the seating area, dining area, kitchen and from the study. It became the centrepiece of the home, with the TV being hidden in a cabinet when not in use. A Control4 system was added to add simple controls to the **TV lift**

**mechanism** and video source as well as the audio system which consists of Radio Tuner, CD and digital streaming functionality.
